

Imagine Edgenuity

Supporting Students with Disabilities

The Growing Concern

According to the U.S. Department of Education (2019), approximately 14 percent of public school students, or 7.3 million youth ages 3–21, receive special education services under the Individuals with Disabilities Education Act (IDEA). These students are heterogeneous in terms of ability, learning style, and needs. The majority of students receiving special education services have specific learning disabilities (33 percent), but others have similarly compelling challenges: 19 percent have speech or language impairments; 15 percent suffer from health issues; 6 percent possess general intellectual disabilities; and the remaining students have emotional problems, autism, developmental delays, hearing impairments, orthopedic impairments, or multiple disabilities (Irwin et al., 2021).

IDEA requires public schools to provide students with learning, cognitive, physical, emotional, or behavior disabilities with a free, appropriate public education. However, data indicate that special education students are not receiving the targeted support needed to master subject material. According to the 2019 National Assessment of Education Progress (NAEP), only 9 percent of students with disabilities achieved proficiency or higher in math, compared to 37 percent of Grade 8 students without disabilities (National Center for Education Statistics, 2019a). Similarly, only 7 percent of students with disabilities achieved reading proficiency, compared to 37 percent of students without disabilities (National Center for Education Statistics, 2019b).

Imagine Edgenuity: Supporting Students with Disabilities

Edgenuity courses include the following evidence-based practices designed to meet the needs of students with disabilities.

1. Provide explicit instruction

Explicit instruction includes setting learning goals, modeling with examples and non-examples (examples that are not correct), and providing multiple opportunities for practice. A meta-analysis by Vaughn, Wanzek, Murray, & Roberts (2012) found that explicit instruction improved acquisition of basic skills and abstract concepts among students with disabilities.

Our solution: Explicit instruction is the cornerstone of Edgenuity courses. That is why our courses feature on-screen instructors who deliver explicit instruction, orient students to the lesson goals, ground concepts in relevant real-life and worked examples that show the answer, and offer clear and concise explanations of subject matter. Tasks, assignments, and assessments embedded throughout each course provide students the opportunity to exercise higher-order thinking skills of analysis, evaluation, and application. They also offer students the chance to apply learned skills and demonstrate information transfer.

2. Model learning strategies

Research indicates that many students with disabilities face challenges in organizing ideas, selecting strategies to process information, focusing on activities, setting goals, and monitoring their actions (Vaughn et al., 2012). Experts agree instructors should model learning strategies for this population of students.

A meta-analysis by Jitendra, Burges, & Meenakshi (2011) revealed that students with learning disabilities and behavioral disorders improved their ability to comprehend text after they were taught metacognitive strategies.

A meta-analysis by Xin & Jitendra (1999) revealed that mathematics interventions that included strategy instruction led to significant gains in mathematical problem-solving ability.

Our solution: Edgenuity's on-screen teachers model learning strategies and explicitly teach students a wide variety of metacognitive strategies, such as self-monitoring, self-evaluation, goal-setting, questioning, and self-explanation. Students learn to draw upon already-known concepts and apply understanding to new, unfamiliar contexts. They are also taught how to identify appropriate learning strategies and to monitor their own understanding.

3. Make instruction accessible

Experts agree that curriculum should be accessible and provide students with multiple means of representation, expression, and engagement (Xin & Jitendra, 1999). Visual aids and non-written expression enable special education students who have difficulty with audial, written, or verbal instruction to organize key concepts. A research study by Kim, Vaughn, Wanzek, & Wei (2004) supports the use of graphic organizers to promote comprehension among students with learning disabilities across all grade levels and content areas.

Our solution: Edgenuity courses provide students with multiple means of representation, expression, and engagement.

Multiple Means of Representation: Edgenuity courses use video lectures, graphic displays, text, simulations, video captioning, and read-aloud support features. Key concepts and tasks in Edgenuity courses are explained using multiple representations (verbal, concrete manipulative, numerical, graphical, and symbolic), and students are guided in mapping meaning among the varied representations. Graphic organizers (web diagrams, hierarchical diagrams, concept maps, T-charts, Venn diagrams, flow charts, timelines, and sequence graphics) are included in instruction, tasks, and assignments.

Multiple Means of Expression: Edgenuity courses require students to read, write, practice, explore, create, and discuss. Throughout Edgenuity instruction and assessments, students are presented with opportunities to manipulate images, answer questions, highlight text, complete surveys, and fill out graphic organizers. These multiple means of expression appeal to multiple learning styles and allow students to demonstrate their knowledge in a variety of ways.

Multiple Means of Engagement: Edgenuity courses are designed to engage students in a variety of ways. The self-paced technology is a motivating medium for students, and the on-screen teachers present course concepts in ways that are relevant to students' lives. Further, courses are designed to promote self-regulation. Detailed course maps and pacing guides clearly state expectations, provide students with a structured overview of course activities and objectives, and visually alert students and teachers to students' course progress and pace.

4. Provide tools to support learning

Research indicates that targeted support improves the academic success of students with disabilities (Kim et al., 2004). Teachers must provide scaffolds to support learning, then gradually remove them once student mastery is achieved (Larkin, 2001).

A meta-analysis by Gersten, et al. (2009) found that scaffolding helped improve math achievement and motivation for students with disabilities.

Our solution: Edgenuity presents a wide array of tools to support student learning. Before instruction, teachers can create tutoring modules to give struggling students a more simplified explanation of fundamental concepts and skills. Instructors also have the option of enabling diagnostic pretests to modify a student’s learning trajectory within a course.

Relations and Functions: Instruction

LESSON QUESTION

How can you describe a relationship between x and y ?

Representations

Equations
 $y = x^2 - 1$

Words
 y is 1 less than the square of x .

Tables

x	y
-1	0
0	-1
1	0
2	3

Graphs

Next: Basic terms for relationships

0:02 / 0:51

Imagine Edgenuity math courses use multiple representations to make concepts clearer.

Assignment calendars with clear due dates give students the structure they need to maintain focus and efficiently manage time and effort. Students have access to a digital notebook, as well as downloadable Guided Notes to scaffold their note-taking process. Students also benefit from the eWriting tool, which helps students organize their thoughts during the writing process. Students also have access to the Edgenuity toolbar, which includes text mark-up (highlighting, word look-up, and annotation), language support (read-aloud and translation), as well as a number of specialized tools for math and science (a variety of calculators, references such as a periodic table, and other learning supports). The Edgenuity CloseReader™ includes contextual definitions for key vocabulary, text-based teacher’s notes, and embedded comprehension questions. After instruction, educators can extend the time allotted for assessment and number of retakes.

The Edgenuity LMS also assists educators in accommodating students with IEPs or 504 plans. Educators can reduce the number of questions on assessments, reduce the number of answer choices on assessment items, adjust the assessment timer (and hide it from student view, if desired), and view an IEP icon to quickly identify students with accommodations on the Manage Students page.

Name ▲	Username	Ext ID
Allen, Jaxx	jaxallen	IEP
Distractor1, SVR	svrdistr39	IEP

IEP icon to quickly identify students with accommodations

5. Provide appropriate feedback

Research demonstrates that positive, corrective feedback that explains the reasons for errors and directs students through the correction process is associated with improved outcomes for special education students (Konold, Miller & Konold, 2004).

Edgenuity offers Course Reports for monitoring student progress.

Our solution: Students receive immediate, corrective feedback each time they respond to a question within Edgenuity instruction and assignments. Feedback messages are consistently designed to refine students' understanding of concepts and correct misconceptions. Edgenuity withdraws explanatory feedback as students demonstrate success.

Available Accommodations, Modifications, and Supports

- Extended time for assessments
- Reduced number of items on assessments
- Reduced distractors for multiple-choice items
- Reduced course length/modified work load
- Word look-up tool
- Highlighter tool
- Ability to use notes on assessments
- Read-aloud and screen-reader compatibility
- Captions and transcripts
- High-contrast and limited visual distractions
- Ability to rewind and replay instruction
- Guided notes
- Save and exit to break activities into shorter sessions

6. Capitalize on technology

Research indicates that technology can level the playing field for students with disabilities by providing customized supports that make the learning environment more active, accessible, and engaging (Hasselbring & Glaser, 2000).

Our solution: Edgenuity's courses are designed to reduce learner anxiety and ensure instruction meets the needs of all students. Edgenuity recognizes that deeper transfer occurs when students are actively engaged in their learning process and apply what they have learned to real-world settings. Accordingly, Edgenuity uses direct video instruction, interactive web links, virtual labs, graphic organizers, manipulatives, and simulations to encourage active engagement in courses.
